redni	Absence of Anti-CSRF Tokens
	No Anti-CSRF tokens were found in a HTML submission form. Cross-site request forgery jest atakiem, który obejmuje zmuszanie ofiary do wysania dania HTTP do miejsca celowego bez ich wiedzy lub intencji w celu przeprowadzenia akcji jako

Opis	ofiara. Podstawow przyczyn jest powtarzalno dziaania aplikacji z przewidywalnymi adresami URL / formularzami. Charakterem ataku jest to, e CSRF wykorzystuje zaufanie, jakie witryna darzy uytkownika. Natomiast skrypty cross-site scripting (XSS) wykorzystuj zaufanie, jakim uytkownik darzy stron internetow. Podobnie jak w przypadku XSS, ataki CSRF niekoniecznie musz by przekierowane na drug stron, ale mog by. Cross-site request forgery jest równie znane jako CSRF, XSRF, atak za jednym klikniciem, jazda na sesjach, zdezorientowany delegat i surfowanie po morzu. Ataki CSRF s skuteczne w wielu sytuacjach, w tym: * Ofiara ma aktywn sesj w witrynie docelowej. * Ofiara jest uwierzytelniona za porednictwem protokou HTTP w witrynie docelowej. * Ofiara jest w tej samej sieci lokalnej co strona docelowa. CSRF zosta uyty przede wszystkim do wykonania akcji przeciwko witrynie docelowej z wykorzystaniem przywilejów ofiary, ale odkryto najnowsze techniki udostpniania informacji poprzez uzyskanie dostpu do odpowiedzi. Ryzyko udostpnienia informacji dramatycznie wzrasta kiedy strona celu jest podatna na XSS, poniewa XSS moe by uyty jako platforma dla CSRF, wczajc w to atak obsugiwany w granicach polityki tego samego pochodzenia.

redni	Content Security Policy (CSP) Header Not Set
Opis	Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks. These attacks are used for everything from data theft to site defacement or distribution of malware. CSP provides a set of standard HTTP headers that allow website owners to declare approved sources of content that browsers should be allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, images and embeddable objects such as Java applets, ActiveX, audio and video files.

Solution	Modern Web browsers support the Content-Security-Policy and X-Frame-Options HTTP headers. Ensure one of them is set on all web pages returned by your site/app. If you expect the page to be framed only by pages on your server (e.g. it's part of a FRAMESET) then you'll want to use SAMEORIGIN, otherwise if you never expect the page to be framed, you should use DENY. Alternatively consider implementing Content Security Policy's "frame-ancestors" directive.

Niski		X-Content-Type-Options Header Missing
Opis		The Anti-MIME-Sniffing header X-Content-Type-Options was not set to 'nosniff'. This allows older versions of Internet Explorer and Chrome to perform MIME-sniffing on the response body, potentially causing the response body to be interpreted and displayed as a content type other than the declared content type. Current (early 2014) and legacy versions of Firefox will use the declared content type (if one is set), rather than performing MIME-sniffing.

	Metody	GET
	Atak	
	Evidence	
	Other Info	This issue still applies to error type pages (401, 403, 500, etc.) as those pages are often still affected by injection issues, in which case there is still concern for browsers sniffing pages away from their actual content type. At "High" threshold this scan rule will not alert on client

	or server error responses.

Other Info	This issue still applies to error type pages (401, 403, 500, etc.) as those pages are often still affected by injection issues, in which case there is still concern for browsers sniffing pages away from their actual content type. At "High" threshold this scan rule will not alert on client or server error responses.
Instances	2
Solution	Ensure that the application/web server sets the Content-Type header appropriately, and that it sets the X-Content-Type-Options header to 'nosniff' for all web pages.

If possible, ensure that the end user uses a standards-compliant and modern web browser that does not perform MIME-sniffing at all, or that can be directed by the web application /web server to not perform MIME-sniffing. |

Informacyjny	Content Security Policy (CSP) Report-Only Header Found
Opis	The response contained a Content-Security-Policy-Report-Only header, this may indicate a work-in-progress implementation, or an oversight in promoting pre-Prod to Prod, etc.

Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks. These attacks are used for everything from data theft to site defacement or distribution of malware. CSP provides a set of standard HTTP headers that allow website owners to declare approved sources of content that browsers should be allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, images and embeddable objects such as Java applets, ActiveX, audio and video files. |
